

## Data that moves.

With intelligent data  
Management comes new  
Efficiency in the supply  
and decision-making process  
of the Bundeswehr

### A New Era of Defense.

- » **A new approach is changing the world of defense:**  
The SmartCube and the Open BI Platform set standards by seamlessly superimposing existing infrastructures and analyzing processes globally and locally in real time with the help of lean data.
- » **The result?**  
High-precision KPIs that enable business leaders to improve care of the troops and to increase combat readiness.

### Experience is good, data is better!

- » The OpenBI Platform intuitively prepares these insights and makes them accessible to logistics management and management – optimization potentials become clearly visible.
- » The supply chain is being massively optimized; manual interventions are reduced.
- » **This shows:**  
Data that moves is the key to greater efficiency and security. The solution massively supports the digitalization process.

### First prototypes also show positive results in other areas.

- » Initial implementations of the SmartCube and the OpenBI Platform have led to impressive successes:  
Increased efficiency, increased availability, seamless supply, Real-time information that leads to faster decisions.
- » Security: Due to automation, decisions can be made quickly and efficiently.
- » Due to a shadow IT, complex IT infrastructures and information is made available to e2e quickly.

### From Büren with Competence

- » As a German startup, we have a clear focus on data security - the data analysis remains largely local and is strongly protected.
